LinkedIn | GitHub | Portfolio

Software Engineer with 12 months of internship experience across full-stack web and cross-platform mobile development. Built production applications using React.js, React Native, Node.js, Express.js, MongoDB, and REST APIs. Experience with JWT-based authentication, role-based authorization, database schema design, and query optimization. B.E. Information Technology, 2026.

Experience

Full Stack Developer Intern - Climekare Sustainability Private Limited Aug 2025 - Mar 2026

- Built a full-stack web application using React.js, Node.js, Express.js, and MongoDB supporting three user roles and end-to-end carbon credit tokenization workflows.
- Developed 10+ RESTful APIs with JWT-based authentication and role-based authorization for secure multi-role access control.
- Designed MongoDB schemas and optimized queries, reducing query execution time and improving application response times by 30%.
- Owned frontend–backend integration across the application, ensuring consistent API contracts and reliable feature delivery.

Front-end Developer Intern - Athena Automation Feb 2024 - Aug 2024

- Built a responsive cross-platform mobile frontend in React Native with role-based access control and a shared component architecture.
- Architected a reusable component library that cut development time by 40% across multiple application modules.
- Delivered the complete React Native frontend across scheduled releases with zero delays, collaborating in a 3-member team and owning all UI modules end-to-end.

Skills

- **Languages:** JavaScript, TypeScript, Java, Python, SQL
- **Backend:** Node.js, Express.js, RESTful APIs, JWT Authentication, MVC Architecture
- **Frontend:** React.js, React Native, HTML5, CSS3, Tailwind CSS
- **Databases:** MongoDB, MySQL, SQLite, Oracle
- **Concepts:** OOP, DBMS, Database Design, SDLC, Agile, DSA
- **Tools**: Git, GitHub, Postman, Expo
- **AI / GenAI:** LLM API Integration, Groq, Llama 3.3, Prompt Engineering

Projects

Blockchain-Based Carbon Credit Tokenization and Carbon Off-Set Platform

Tech Stack: React.js, TypeScript, Node.js, Express.js, MongoDB, Solidity, Hardhat, IPFS, JWT Authentication, Material UI

- Developed a full-stack blockchain platform supporting 3 user roles and end-to-end carbon credit tokenization workflows.
- Implemented secure 10+ RESTful APIs and NoSQL database operations supporting complex business workflows, data analysis requirements, and secure communication between frontend and backend systems.
- Engineered 2 ERC-1155 smart contracts for token issuance, transfer, and retirement, preventing double counting and ensuring verifiable carbon credit ownership.
- Integrated IPFS-based decentralized metadata storage, automated NFT certificate generation, and QR-based public verification linked to retired carbon credits.

Cross-Platform Offline Music Player Application

Tech Stack: React Native, Expo, TypeScript, SQLite, NativeWind, Groq API

- Developed a local-first cross-platform music player supporting offline playback, playlist management, and media indexing for libraries containing 2000+ songs.
- Designed a SQLite-based metadata management system with indexed storage, caching, and streamlined query execution for large music libraries containing 4000+ songs.
- Integrated AI-based genre classification using the Llama 3.3 70B model (Groq API) to auto-generate playlists, with local fallback and caching for offline reliability.
- Optimized large music-library rendering using React Native FlatList with virtualization, pagination, and efficient item rendering, reducing UI lag and improving scrolling performance for libraries containing 4000+ songs.

Education

Marathwada Mitra Mandal's College of Engineering - Pune, Maharashtra Oct 2022 - July 2026
B.E. - Information Technology CGPA 7.09

Achievements / Certifications

Runner-up Position, **TechSpark 2K26** - awarded ₹1,000 cash prize. (out of 30+ teams) - Link
Excelr **Full-Stack Developer** Course - Link
